PROFILE

Junior Backend Developer with hands-on experience building web applications and REST APIs using **Python, FastAPI, Flask, SQLAlchemy, PostgreSQL, SQLite, Docker, and basic JavaScript**. Skilled in designing database schemas, implementing CRUD operations, developing clean and maintainable backend solutions, and working with modern development tools.

Previously spent **six years at LG Electronics**, where I developed strong analytical and problem-solving skills through automated PCBA testing, PCB-level repair, hardware diagnostics, and troubleshooting. This experience strengthened my attention to detail, ability to analyze complex technical systems, and work effectively with technical documentation.

Currently seeking a **Junior Backend Developer** position where I can contribute to real-world backend projects, continue improving my software engineering skills, and grow as a backend developer.

TECHNICAL SKILLS

Programming Languages

- Python
- SQL
- JavaScript (Basic ES6)

Backend Development

- FastAPI
- Flask
- REST APIs

- SQLAlchemy
- Pydantic
- Object-Oriented Programming (OOP)
- CRUD Operations
- JSON

Frontend

- HTML5
- CSS3
- JavaScript (Basic)

Databases

- PostgreSQL
- SQLite

Tools & DevOps

- Git
- GitHub
- Docker
- Docker Compose
- Postman
- VS Code
- Python Virtual Environments (venv)

Deployment

- Render
- Netlify

Electronics & Hardware

- Automated PCBA Testing (DFT)
 - PCB-Level Repair
 - BGA Rework and Reballing
 - Flash Memory Replacement
 - DDR Memory Replacement
 - SMT Component Replacement
 - Hardware Troubleshooting
-

PROFESSIONAL EXPERIENCE

DFT Operator | LG Electronics

3 years

- Operated automated DFT systems for testing assembled printed circuit boards (PCBAs).
 - Performed production testing using computer-controlled testing equipment.
 - Analyzed diagnostic reports and software-generated test results.
 - Identified defective PCB assemblies for further repair processes.
 - Followed manufacturing procedures, quality standards, and technical documentation.
-

Electronics Service Technician | LG Electronics

3 years

- Performed PCB-level repairs according to manufacturer service documentation.
 - Specialized in BGA rework, reballing, and component-level repair.
 - Replaced Flash memory, DDR memory, and SMT components.
 - Diagnosed hardware failures and restored faulty electronic boards.
 - Used professional soldering and repair equipment while maintaining high-quality standards.
-

PROJECTS

Notes API

Technologies: FastAPI, PostgreSQL, SQLAlchemy, Docker, Docker Compose, Pydantic

Live Demo: <https://notes-app-vc1f.onrender.com/>

- Developed a RESTful API for managing notes.
- Designed modular project architecture with separated routers, database models, and schemas.
- Integrated PostgreSQL database using SQLAlchemy ORM.
- Implemented CRUD operations and request validation with Pydantic.
- Containerized the application and database using Docker Compose.
- Managed application configuration using environment variables.

Todo App

Technologies: Flask, SQLite, HTML5, CSS3

Live Demo: <https://todo-app-kjp3.onrender.com/>

- Developed a task management web application using Flask and SQLite.
 - Implemented full CRUD functionality for creating, updating, and deleting tasks.
 - Created a responsive user interface using HTML and CSS.
 - Managed application structure and database operations.
 - Deployed the application on Render.
-

Logo Generator

Technologies: Flask, HTML5, CSS3

Live Demo: <https://login-app-wplr.onrender.com/>

- Created a web application that generates logos based on user input.
 - Developed a simple and responsive user interface.
 - Managed project dependencies using Python virtual environments.
 - Organized application logic using Flask routes and templates.
 - Deployed the application on Render.
-
